Miscellaneous work all day clearing the items that have gathered up while finishing up the Indian section. Worked on the copperhead nomenclature paper; also the gopher snake paper was worked on for page proofs. Was out for dinner.

Dr Ernest R Tinsham of Tucson spent much of the afternoon in the basement working on horned toads. Took quite a bit of my time Shaw was also there.

The m'callii taken 10 mi NE of Punta Penasco (next day) was in a dune area of loose drifting sand. Tops of dunes capped with mesquite or creosote. The two platyrhines taken on the road to Las Chollas Point were in a flat sandy area well covered with burro weed. Here the sand was packed hard - not drifting.

The Umias never seek refuge by burying themselves in the sand. They always go down rodent holes that are plentiful in these dunes.
